The objective of this study was to determine understanding of bed bathing practices over time after the implementation of a standardized bed bathing protocol” Reese et al (2017).

Abstract:

The objective of this study was to determine understanding of bed bathing practices over time after the implementation of a standardized bed bathing protocol. An online survey addressing bathing practices was administered preintervention and 6 and 18 months postintervention to all nurses and technicians caring for adult patients. Survey responses suggested that the intervention resulted in sustained understanding of the standardized bed bathing protocol.
