

Intravenous products: Infection Control Today report “Teleflex has announced the addition of VasoNova Vascular Positioning System (VPS®) to its existing Peripherally Inserted Central Catheters agreement with Amerinet. The agreement began May 1, 2011 and runs through April 30, 2014.

“This agreement brings a powerful new option for catheter placement confirmation to clinicians,” noted Paul Molloy, President, Vascular Division, Teleflex. “VasoNova recently received 510(k) clearance from the U.S. Food and Drug Administration (FDA) to market the VPS peripherally inserted central catheter tip location technology as an alternative to chest x-ray or fluoroscopy in adult patients.”
