Abstract:

Vascular access device insertion is a common procedure in healthcare, and complications associated with vascular access can be serious and cause considerable patient harm. The use of care bundles to reduce the risks of these complications is well documented. However, the removal of devices, especially those associated with medical adhesive, can cause significant skin injuries, which often could be avoided if this aspect is included in the care bundle and the risk factors are better understood in healthcare. Appeel Sterile is an effective sterile silicone-based medical adhesive remover that is available in a variety of formats. It is the only sterile medical adhesive remover available, which makes it the safest choice for use with vascular access devices.
