

UC Health, an academic health system, is focused on improving the management of infusion therapies for its patients” Boesken et al (2019).

Extract:

UC Health, an academic health system, is focused on improving the management of infusion therapies for its patients. Upon learning of a new diagnosis, patients can feel scared, confused, and overwhelmed. They carry the stress of a chronic disease or cancer and perceive a burden of illness and the potential fight for their life and well-being. In parallel to these changes in the perception of the patient’s health, patients and families feel additional stress in understanding and navigating the financial impact of treatment. Providers seek to initiate treatment quickly upon diagnosis, with the intent to prevent and...
