

This unique case highlights the importance of this technology in management of a complication arising from a central line placement in an intensive care unit (ICU)” Siddiqui et al (2016).

Abstract:

The use of ultrasound (US) in clinical practice is becoming increasingly popular. This unique case highlights the importance of this technology in management of a complication arising from a central line placement in an intensive care unit (ICU).

ReTweet if useful... Is ultrasound useful to locate lost guide wires following central line placement? <http://ctt.ec/ft0cR+> @ivteam #ivteam
