

The Deep Access IV Catheters are designed to access deeper veins for difficult access patients with damaged or not visible or palpable superficial veins. They are also designed to reduce the risk of complications associated with accessing deeper veins” BBraun (2017).

BBraun report “B. Braun Medical Inc. recently introduced the Introcan Safety® Deep Access IV Catheters to its growing portfolio of products that help improve the success of peripheral intravenous PIV access. Longer peripheral catheters facilitate IV procedures involving ultrasound guidance, access to deeper veins, patients with difficult access, or for those who are overweight and obese.”
