

Intravenous products: Access Scientific, Inc. announced today that it has obtained CE Mark approval for its MicroAccess WAND(R), the world's first all-in-one safety interoducer. The CE Mark enables Access Scientific to sell the MicroAccess WAND broadly around the globe. The device has already received FDA clearance.

The MicroAccess WAND is a sophisticated new medical device that enables clinicians to more quickly and safely insert a sheath or catheter into a patient's peripheral vasculature. The device combines all components of the older, Modified Seldinger Technique into a unitary device that provides faster, safer, simpler over-wire vascular access in a relatively bloodless procedure.
